

Quality Policy

As Bakcycle Geri Dönüşüm San. ve Tic. AŞ, our aim is to recycle the post-consumer plastic waste, which is mostly burned or stored in waste collection facilities to be disposed of, and the plastic waste originating from industries, which is growing day by day, with a production line that has innovative and technological investments, and to ensure that plastic waste is used as a qualified resource with a focus on sustainability. In the journey we set out for this purpose, we commit that as following;

- To meet the needs and expectations of all stakeholders in the best way possible by constantly evaluating them,
- To comply with the standards and legal requirements regarding national and international recycling activities,
- By following scientific and technological developments closely, with the principle of continuous development and improvement, to carry out projects that will increase performance and efficiency, to develop systems, and to provide the right and sufficient resources at every point where it will be needed,
- To ensure continuity of cooperation with internal and external stakeholders who make significant contributions to all processes within the scope of its activities,
- Periodically reviewing the goals and objectives, correctly identifying and managing the risks and opportunities of the processes on the way to the goals,
- To organize training programs to increase the competence, knowledge and skills of employees, based on seeing people as a value in achieving goals,
- To organize training programs for all stakeholders within the scope of the quality management system in line with their needs,
- To ensure effective and open communication with its employees and to direct all employees towards its policies and goals,
- To carry out studies to increase product quality and portfolio in line with customer needs and expectations with an innovative approach, to keep customer satisfaction at the highest level and to continuously improve,
- Focusing on the analysis and evaluation results of all outputs within the scope of the quality management system, to continuously improve the suitability, adequacy and effectiveness of the system,
- It will fully implement, develop and update the ISCC system requirements within the scope of chain of custody control points and traceability.
